

20th April, 2014

To whom it may concern,

As a geologist, through the time from 2003 to 2013, representing different mineral exploration companies (“Balkan Mineral and Mining”, “Avala Resources”, “Dunav Resources”) clients to the drilling contractor “International Drilling Services” (IDS) – I have been working with IDS on different projects in Serbia and Bulgaria with provided hundreds of thousands meters of quality diamond drilling and reverse circulation (RC) drilling.

IDS has proven to be a very professional and reliable drilling contractor and has delivered high quality diamond drilling core and RC chips.

IDS’s personnel – top management, supervisors and drillers are very competent in all aspects of their work and highly skilled professionals, responsible and dedicated to their client’s demands and procedures with excellent safety and ecology attitude.

Their drill rig fleet – coring and RC, maintained in top condition and operated by professionals is capable of delivering high quality diamond drilling core form + 1000m depths and dry RC samples of consistent weights from +300m depths.

I can highly recommend International Drilling Services for other exploration drilling projects.

A handwritten signature in blue ink, appearing to read 'Yordan Genchev', is placed on a light blue rectangular background.

Sincerely,
Yordan Genchev.
Senior Exploration Geologist
