

Dec 12, 2013

DrillEx successfully drilled the deepest hole (to date) on our project and to our knowledge, the deepest mineral exploration hole ever drilled in the Balkans as well as the deepest PQ hole drilled on the Balkans, and showed excellent flexibility to do so beyond our existing contract terms. They provided good discussion on drilling options and showed flexibility in the program as it evolved and as challenge arose (increasing hole depths, navi/directional, etc). They employed a very experienced, knowledgeable and innovative expat driller willing to attempt whatever would work to get the job done. Except for a brief two-incident episode at the beginning of their time on site, their safety record and housekeeping are excellent in our experience. Their vehicles are modern, well-maintained, and were fitted with air-bags giving us additional comfort that shift changes would be done with the maximum standards possible.
